

Space

*A nebula is the spinning souls of the dead,
A star is a fiery, yellow beach ball thrown into the sky,
A black hole is the gate way to the black cemetery,
A wormhole is the slithery throat of a once beast,
The moon is a dimming light bulb cast into space,
Crashing planets are the fiery impact of nazi bombs
Meteors are sharpened knives ready to penetrate the
flesh of a planet.*

Space by Daniel.
